Mozilla Mac Printing Article

Author's note: This is an article that I rewrote for the Mozilla Support community. There were multiple inconsistencies between the original article and what actually happened when you tried to print on Mac, so I had to delete most of the original to proceed. The image below is the most recent update of the article, with some changes on it from after my initial rewrite.

How to print web pages in Firefox

Learn more on how to print web pages using Firefox's printing features.

- For troubleshooting printing problems, see Fix printing problems in Firefox.

- To print pages in a simplified format, see Print simplified, clutter-free pages in Firefox.

Table of Contents

- Print a web page
- Advanced tips

Print a web page

1. Click the menu button ≡ and then click Print... .

   - This will open a print preview for that web page.

2. Choose your printing options:

- **Destination:** Use the dropdown menu to choose the device or document to print to or save. Select `Save to PDF` in the drop-down menu to save the shown preview as a PDF file.
- **Copies:** Choose how many copies to make (available for printers and faxes).
- **Orientation:** Allows you to choose between portrait and landscape orientation of the printed page.
- **Pages:** Allows you to choose what pages you would like to print.
- **Color Mode:** This allows you to choose whether to print in color or black and white (this may not be customizable for some printers).
- **More settings:** Expand this section for more options, such as Paper size, Scale, Pages per sheet, Margins, Format (Original or [Simplified], if available), Print headers and footers and Print backgrounds. (If you select Simplified under Format, you won't be able to select Print backgrounds.)

3. After adjusting the settings, click `Print` to start printing.

Advanced tips

- If you want to edit the web page content before printing, you can use an extension from [Firefox Add-ons](#) such as [Print Edit WE](#).
- To print a single image from a page, you can typically right-click it and select `Open Image in New Tab` or `View Background Image` then print using the instructions above.
- Web pages can set themselves up to appear different on paper to how they look on screen, so don't be surprised to see some changes.
